THE QUARTERLY CUMULATIVE INDEX

The Quarterly Cumulative Index to Current Medical Literature is published the middle of April, July, October and January. The April number indexes the journals issued during January, February and March; the July number contains in one alphabet references to journals published during April, May and June, with the addition of all that appeared in the April issue of The Index. Thus the July issue supersedes the April, and similarly the October issue supersedes the July. Each quarterly number is an inclusive index to the literature of the year up to the month of publication. This, the January issue, is an index to the literature of the preceding year — 1919 — and is bound in cloth for permanent preservation.

Authors and subjects are arranged in one alphabet on a true dictionary plan. At no time during the year is it necessary to consult more than one alphabet to learn what articles have been written by a certain author during the year, or what articles have been written on a given subject during the year. Thus every quarter the literature of the year is brought up to date and made accessible for ready reference.

The Quarterly Cumulative Index to Current Medical Literature indexes the original articles in the better and more accessible medical journals. On page 18 will be found a list of the journals indexed. The normal number of European journals have not been received during the war, but are again beginning to come. These will be added in future issues of The Index.

A list of new books published during 1919 and a list of government documents of interest to physicians published during the year precede the main index.

The titles of articles in foreign languages have been translated in order to conform to the style of The Index. Suggestions on this point or on any subject connected with The Index will be welcomed.

QUARTERLY CUMULATIVE INDEX TO CURRENT MEDICAL LITERATURE

Original articles only are indexed. For list of journals indexed and key to abbreviations see pages 8-10. Authors and subjects are arranged in one alphabet. The citation gives abbreviation of magazine, volume number (in black face type), page, month (day of month, if a weekly publication) and year, in order named, i. e., J.A.M.A. **72**: 1, Jan. 4, '19.

Each author entry is followed by a brief clue to the subject in brackets, e. g.,

HANNAH, L., [Ragweed dermatitis] J.A.M.A. **72**: 853, March 22, '19

This reference is to an article by Louis Hannah on "Ragweed Dermatitis: A New Treatment, with Preliminary Report of a Case" in The Journal of the American Medical Association, volume 72, page 853, March 22, 1919.

Each subject is followed by the name of the author in brackets, e. g.,

ANEMIA, pernicious, chemistry of, [M. Kahn & J. Barsky] Arch.Int.Med. **23**: 334, March '19

This reference is to an article entitled "Studies of the Chemistry of Pernicious Anemia" by Max Kahn and Joseph Barsky in the Archives of Internal Medicine, volume 23, page 334, March, 1919.

Abstracts of articles in foreign languages which have appeared in the current literature department of The Journal of the American Medical Association are noted. The reference to the abstract is given after the subject entry, not the author, thus: ab. **72**: 901, Mar. 22, '19. This refers to an abstract in The Journal, volume 72, page 901, March 22, 1919.

Local diseases and injuries are as a rule placed under the name of the organ or region affected, i. e., "Brain, abscess of," "Stomach, cancer of," "Femur, fracture of." Articles on the etiology, diagnosis and treatment of cancer in general are indexed under Cancer; likewise general articles on fractures are indexed under Fracture. Articles on the action of a drug in general or the method of administering it are indexed under the name of the drug; but articles on the action of a drug in a particular disease are indexed under the disease, i. e., an article on "An Apparatus for the Administration of Arsphenamin" is indexed under Arsphenamin, while an article on "Arsphenamin in Syphilis" is indexed under Syphilis.
